CHILDHOOD TRAUMA, PAIN ANXIETY, AND FEAR OF CANCER RECURRENCE

FEAR OF CANCER RECURRENCE
- 69-75% of young adult cancer survivors experience fear of cancer recurrence, 20% of whom experience high fear

CHILDHOOD TRAUMA AND CANCER SURVIVORSHIP
- Research indicates childhood trauma is associated with elevated distress due to cancer-related pain

PAIN AND FEAR OF CANCER RECURRENCE
- Cancer-related pain is associated with fear of cancer recurrence, yet researchers have not determined factors that may account for this association
